RACK
BIKE-UNIT PRO

**FUNCTIONAL,
VERSATILE, PRECISION-ENGINEERED
SINGLE BIKE STORAGE SYSTEM**

Dry it. Store it. Use it.

The Bike-Unit PRO is a professional rack designed to store bikes of different categories and sizes. The L-shaped steel structure has the form of a tapered trough on the inside in which the front wheel of the bike is wedged and immobilised. For an even firmer hold on the bike, the PRO model is equipped with a profiled rotating clamping element which additionally grips the wheel from the frame side. The finely tuned grip system is based on 3-point contact support, which ensures stability, safe storage and extremely versatile use (from road bikes, through the Trail category, the widest electric bikes, to DH models). The maximum width of the tyre that fits in the rack is 80mm.

The single Bike-Unit PRO model, supported on two wide bases, is designed for home use and for smaller bike shops.

The product is made of high-quality powder-coated galvanised steel, guaranteeing durability and resistance to corrosion.

Thanks to its tailored multi-piece structure, the assembly of the stand is intuitive and the product is provided in a small, ergonomic cardboard box.

BIKE-UNIT PRO

Q-BK-UN-210

TECHNOLOGIES:

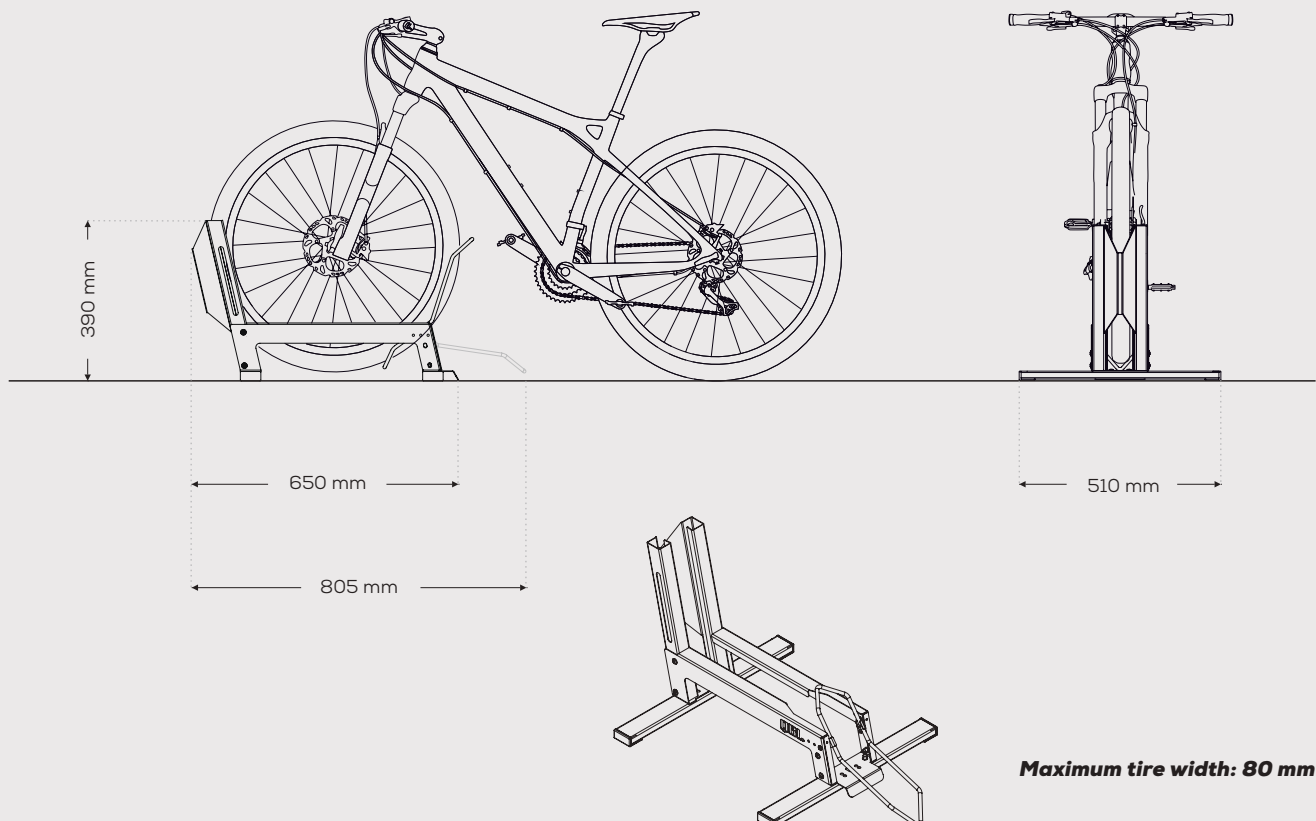

- **Rotating clamping element for an even tighter hold**
Additional immobilisation of the front wheel
- **3-point bike holding system**
Efficient storage due to secure front wheel support
- **Extremely versatile use**
Adapted to various bike models and tyre widths (max. 80mm)
- **Stable steel structure**
Two wide bases ensuring stability and safety of storage
- **Double protection**
Galvanized steel and powder coating
- **Ergonomic packaging and intuitive assembly**
Fold-out design with perfectly matched components
- **Modern design**
A functional solution in an attractive form
