DISCOVER →

We are a recognised European manufacturer of storage, drying and display systems for sports equipment. Each year, we provide our customers from over 40 countries with thousands of functional racks, advanced drying equipment, innovative depot lockers and specialised furniture. The solutions we design have a direct impact on the organisation and the efficiency of operations of ski & bike rentals, ski depots and sports shops. They improve the ergonomics and comfort of use. The innovative design of QBL products is appreciated not only by the users, but also by independent international experts. We have been recognised twice with the prestigious ISPO Award Winner.

MISSION

THE NATURE OF OUR ORGANISATION

The nature is the source of our inspiration and our drive for continuous improvement. We care about natural environment and share a passion for sports and outdoor challenges. We enjoy testing our limits and searching for uncompromising quality. That is why we provide innovative solutions that ensure the safety and durability of sports equipment. Above all, we share our experience and adapt to individual needs to support our customers' businesses. This is a great responsibility and a challenge. In any mountains, in any city in the world we are ready for it.

TRADE FAIRS

NATURAL CALL FOR COOPERATION

From the very beginning most of our business initiatives were international. The most important fairs – in Germany, Austria, Italy, Russia and France – played a key role in building the strong, international position of the QBL Systems brand. Wherever we are it is always an amazing experience to meet current customers, present key product innovations and establish new relationships. We participate regularly in the following events: ISPO Munich_Germany, Sport Achat Hiver Lyon_France, Prowinter Bolzano_Italy and Interpin Innsbruck_Austria.

COMPANY

49° 44' 37.68'' N 18° 45' 15.4332'' E

The QBL company was founded in 2004. Over the course of years of full commitment to designing new solutions and developing international connections, QBL significantly increased its production and sales capacity. Its founder gathered a team of people – with similar values, goals and ambitions – who wanted to create unique projects on a global scale. Today, the company's headquarters is located in a newly established, innovative production and office facility. QBL Systems has an extensive, dynamically developing distribution network and carries out projects related to sports infrastructure in over 40 countries.

ADVANTAGES

OUR CORE ASSETS

Most of our production chain is within the company's structure and is located in one area. This gives us the opportunity to better coordinate and synergize our production processes. First and foremost, though, it allows us to successfully respond to individual, non-standard customer needs. We can meet specific requirements in terms of product properties and lead times. For years, we have proudly provided our customers with the best value for money.

PLANNING PROCESS

THREE MAJOR STEPS TO SUCCESS

Using our knowledge and experience, we meticulously develop concepts for floor plans of sports shops, rental shops and ski depot facilities. The designs are used as a visual tool to help our customers choose the right quantity, model and size of products. After selecting the best type of arrangement – thanks to advanced graphic tools – we create a 3D visualisation. The image created in the rendering process provides our customers with an extremely attractive tool used for further design and finishing works. Our planning process includes three major steps: 1_ Preliminary design 2_ Finalising the 2D design 3_ 3D Visualisation.

REFERENCES

TRULY IMPRESSIVE RESULTS

Our references include several hundreds of ski & bike rentals, depots and prestigious hotels, popular sports shops, famous clubs and football associations. The geographic scope of QBL activity covers 40 countries located on five continents. Each year, thanks to an extensive distribution network and cooperation with foreign partners, the quality and the functionality of our products are appreciated by new customers around the world. The trust and strong relationships pay off. They fuel the dynamic development of our company as our portfolio of successfully completed projects continues to grow every year.

VISUALISATIONS

MEETING THE HIGHEST EXPECTATIONS

EACH YEAR, WE PREPARE SEVERAL HUNDRED LAYOUTS AND VISUALISATIONS WHICH ENABLE OUR CUSTOMERS TO OPTIMALLY SELECT THEIR STORAGE OR DISPLAY SYSTEMS AND MAKE MAXIMUM USE OF THE SPACE AVAILABLE.

↓

The customer's acceptance of the 2D project allows us to start working in a 3D environment. We use refined models of QBL racks, dryers, lockers or furniture, advanced models of interior design elements, high-quality textures and powerful rendering engines to create really attractive visualisations. They allow our clients to design the interiors of new rentals, hotels, shops or apartments more accurately and to better picture the final result.

THE GEOGRAPHICAL SALES COPE OF QBL SYSTEMS COVERS OVER 40 COUNTRIES ON 5 CONTINENTS. FROM CALIFORNIA AND COLORADO, THROUGH SCANDINAVIA, CHAMONIX-MONT-BLANC AND DOLOMITES TO ELBRUS, KAMCHATKA AND NEW ZEALAND’S SOUTHERN ALPS.

STEP 1

SITE VISIT

We try to start every project with a site visit and an environmental interview. These allow us to identify the most important technical features of the building, determine how to install the display equipment and pre-position the most important storage and presentation systems. Collisions with lighting and ventilation systems are avoided. Based on the interview, we determine the surface area of the display spaces for individual merchandise groups. We also establish the requirements and concepts for cash counters, changing rooms and the forms of the display windows.

INTERIOR SKETCH

CONSTRUCTION SKETCH/INVENTORY

STEP 2

DESIGN DIRECTIONS

One picture is worth more than a thousand words. The design process can be long, complex and sometimes even tedious work for both parties – both the investor and the designer. In this context, understanding each other's needs and expectations – both functional and aesthetic – at the very beginning of the project shortens the path to the final goal. A mood board is a short visual summary of what has been said so far. It is a way to verify whether the designer understands the investor's requirements correctly and the project's interior design principles. Photographs with short descriptions form the basis for further conceptual work, including the creation of more detailed visualisations.

MOODBOARD

STEP 3

WORKING ON A 3D MODEL

On the basis of the collected information and suggestions, we start to work on the 3D model of the object. The representation of the 3D solid allows us to estimate the categories, types and quantities of individual elements of our shop display system. In addition to the technical and functional aspects, we focus on defining the site's interior design. We focus on the consistency and clear form of each space and its compliance with the overall site's character (as defined by the client). We know that the display solutions impacts the image of the shop, its popularity and success.

CONCEPT INTERIOR DESIGN

AXONOMETRIC VIEW

STEP 4

3D VISUALISATION

The customer's acceptance of the 2D project allows us to start working in a 3D environment. Our refined models of QBL racks, dryers, lockers, display modules or furniture make it possible to create advanced 3D designs which meet customers' expectations. We use universal models of interior design elements, high-quality textures and powerful rendering engines to create really attractive visualisations. They allow our clients to design the interiors of new rentals, hotels, shops or apartments more accurately and to better picture the final result.

SHOP DISPLAY SYSTEMS, DEPOT LOCKER SEQUENCE AND MOST OF THE PRODUCTS OF THE UNIQ LINE HAVE BEEN DESIGNED TO CREATE CONSISTENT AND TRULY UNIQUE SPACES.

The interchangeability of the main front elements means individual matching of the appearance of products to the interior and character of the environment in which they are located. The variety of materials and colours (MDF, veneered boards, natural wood or steel surfaces) contributes to the flexibility of designing spaces and creating cohesive compositions – all reflecting the nature of the place and the community.

WALL PANELS WITH DISPLAY ITEMS

GONDOLAS & FURNITURE

OUR SHOP DISPLAY SYSTEM

SMART EQUIPMENT FOR AN ATTRACTIVE EXPOSITION

OUR LINE OF DISPLAY PRODUCTS IS DESIGNED FOR SPORTS SHOPS OFFERING PROFESSIONAL SKIING AND SNOWBOARDING EQUIPMENT, CLOTHING, FOOTWEAR, OUTDOOR GEAR AND VARIOUS TYPES OF ACCESSORIES. THE SYSTEMS CONSIST OF MODULAR ELEMENTS ADJUSTABLE TO THE SALES SPACE, TO ITS SHAPE AND STYLE.

CONSTRUCTION FIXING

MATTER OF SAFETY & STABILITY

WALL-MOUNTED CONSTRUCTION POSTS WITH THE WALL PANELS ARE THE MOST IMPORTANT EQUIPMENT FOR STORING AND PRESENTING MERCHANDISE IN A RETAIL SPACE.

↓

The height of the construction posts and wall panels is 2450mm. The width of the panel is 622mm.

The choice of how to fix the posts depends on the construction of the load-bearing walls in the room. The best solution is to fix the construction posts directly into the wall. If the walls are not strong enough, it is necessary to use alternative solutions for stabilizing the display wall panels - an expansion system, or supports.

WALL FIXING

The choice of fixing depends on the load-bearing parameters of the wall. It is necessary to verify them and select solutions that ensure safe use of the products.

EXPANSION SYSTEM

When the load-bearing capacity of the wall is not sufficient, the mounting posts are stabilized using a strut system. Adjustable expansion bolts allow the posts to be attached to the ceiling.

SUPPORTS

When the load-bearing capacity of the wall is not sufficient, the display modules can also be placed against a wall in a free-standing form - on two 540mm long horizontal supports.

DOUBLE-SIDED SUPPORTS

Double-sided module supports are used together with double-sided construction posts when the display system is set up in a free-standing form inside a room.

WALL PANELS & DISPLAY ITEMS

FOUR TYPES OF WALL PANELS

Wall panels create kind of a scenery for displayed merchandise. They affect both the attractiveness and visual qualities of the products and the image of the entire shop.

BOARD PANEL

A large selection of types and structures enables imitation of both wood and other materials.

MESH PANEL

Made of wire or expanded steel mesh with different translucency of panels in an RAL colour of your choice.

STEEL PANEL

A modern solid steel surface in an RAL color of your choice.

PIN SYSTEM PANEL

The 120mm-long screw-in pin is part of the footwear support and lateral exposure.

WALL PANEL ASSEMBLING

Once the construction posts system is fixed, a wall panel is placed on the horizontal crossbars to provide a backdrop for the products on display. The back of panels has two upright reinforcing posts with integrated hooks ensuring stability and safety of the display system.

DISPLAY ITEMS ASSEMBLING

Items dedicated to individual product groups (like skis, snowboards, apparel, footwear, helmets, backpacks, goggles, accessories, etc.) are mounted on the multipurpose crossbars in any configuration by attaching them with small screws tightened from the back.

Thanks to the densely perforated construction posts and the universal fastening system, the arrangement of display items is simple and extremely flexible.

Display elements are made of steel with the appropriate thickness and stiffness – adequate to the purpose of the item.

IN THE BASE VERSION, THE COUNTER CONSISTS OF FOUR CONNECTED FUNCTIONAL MODULES COVERED WITH A FURNITURE BOARD IN A COLOUR AND STRUCTURE OF THE CUSTOMER'S CHOICE (BLACK BOARD IN THE VISUALISATION).

MODULE WIDTH MIN 600/MAX 900 MODULE DEPTH 720 MODULE HEIGHT 900 MM

SHOP COUNTER MODULAR_ CUSTOMIZED FRONT A

FEATURES

↓
A SHOP COUNTER ISLAND ENRICHED WITH AN ADDITIONAL SPATIAL MODULE MADE OF FURNITURE BOARD. IN ADDITION TO MAKING THE FORM MORE ATTRACTIVE, THE EXTENSION IS USED TO COVER THE ACCESSORIES LOCATED ON THE COUNTERTOP.

FRONT WIDTH 2550 SIDE WIDTH 800 DEPTH 720 HEIGHT 900/1150 MM

SHOP COUNTER MODULAR_ CUSTOMIZED FRONT B

FEATURES

↓
THE ISLAND WITH A DISPLAY MODULE IS EQUIPPED WITH ADDITIONAL SPACE IN THE FORM OF A GLASS AQUARIUM, USED FOR THE PRESENTATION OF SMALLER-SIZED PRODUCTS. THE SOFT BACKLIGHTING GIVES THE DISPLAY ADDED MEANING AND VALUE.

FRONT WIDTH 2800 SIDE WIDTH 2150 DEPTH 720 HEIGHT 900 MM

CHANGING ROOM

FEATURES

↓
A SINGLE CHANGING ROOM MODULE IS BUILT WITH TWO OR THREE WALLS MADE OF FURNITURE BOARD. INCREASING THE WALL THICKNESS (UP TO 72 MM), BY JOINING THE BOARDS, STRENGTHENS THE CHANGING ROOM'S CONSTRUCTION AND EMPHASISES ITS HIGH QUALITY. THE CHANGING ROOM KIT INCLUDES_ A CURTAIN ROD, A CURTAIN, A HANGER HOLDER, A SMALL POUFFE AND A MIRROR (ALSO IN THE VERSION WITH ILLUMINATED EDGES).

WIDTH MIN 900 DEPTH MIN 1200 HEIGHT 2450 MM

THE MODULAR SOFA SYSTEM CREATES FUNCTIONAL, RELAXING SPACES IN VARIOUS CONFIGURATIONS. THANKS TO THE AVAILABILITY OF FOUR COMPLEMENTARY MODULES, IT IS POSSIBLE TO CREATE SEATING AREAS BY THE WALLS OR INDEPENDENT ISLANDS IN THE CENTRAL POINTS OF ROOMS.

OUR SOFAS ARE CHARACTERISED BY A MODERN DESIGN AS WELL AS DURABILITY AND COMFORT OF USE. THE BASES ARE MADE OF FURNITURE BOARDS TO ENSURE STABILITY, WHILE THE USE OF TOP-QUALITY COATED FABRICS GUARANTEES HIGH RESISTANCE TO ABRASION.

QBL SYSTEMS

LET'S GET IN TOUCH

QBL SYSTEMS OPERATES INTERNATIONALLY THROUGH ITS EXCLUSIVE DISTRIBUTORS.

↓

The distribution chain of QBL Systems includes independent foreign companies from the sports sector. These companies have been in the business for many years and understand its specificity. Their experience and knowledge are crucial for QBL's successes abroad.

We encourage you to contact our QBL representatives in respective countries. You can find their current list on our official website.

In case of new markets, where the distribution has not been established yet, we invite you to contact the QBL headquarters in Poland.
