DISCOVER→

We are a recognised European manufacturer of storage, drying and display systems for sports equipment. Each year, we provide our customers from over 40 countries with thousands of functional racks, advanced drying equipment, innovative depot lockers and specialised furniture. The solutions we design have a direct impact on the organisation and the efficiency of operations of ski & bike rentals, ski depots and sports shops. They improve the ergonomics and comfort of use. The innovative design of QBL products is appreciated not only by the users, but also by independent international experts. We have been recognised twice with the prestigious ISPO Award Winner.

STORAGE SYSTEMS

PURE FUNCTIONALITY & SPACE SAVING

They include multiple models of steel racks with various structures and functional solutions. They guarantee durability and storage safety. Thanks to the availability of a wide range of sizes and visual versions, our products can be individually adapted to the available spaces, as well as the needs and preferences of users. The ergonomics of the storage systems ensure efficient use of space and maximise the storage capacity.

DRYING SYSTEMS

EFFICIENCY MEETING DIFFERENT NEEDS

QBL dryers are considered by most of their users as the most efficient devices of this type available on the market. Their efficiency is mainly due to carefully selected high-quality heating components, the system of openable nozzles and a well-thought-out design – which all ensure intensive airflow. Our dryers are energy efficient thanks to the extensive parameterisation of modes and operating times. In the main models it is possible to pre-set times for each day of the week independently.

DISPLAY SYSTEMS

SMART TOOLS FOR ATTRACTIVE EXPOSITION

The new line of products is designed for retail merchandising – sports shops offering professional skiing, and snowboarding equipment, clothing, outdoor gear and various types of accessories. The systems consist of modular elements adjustable to the sales space, to its shape and style. Thanks to the flexibility of our solutions, creating a tailor-made, attractive display area becomes really easy. Each product will find its proper place.

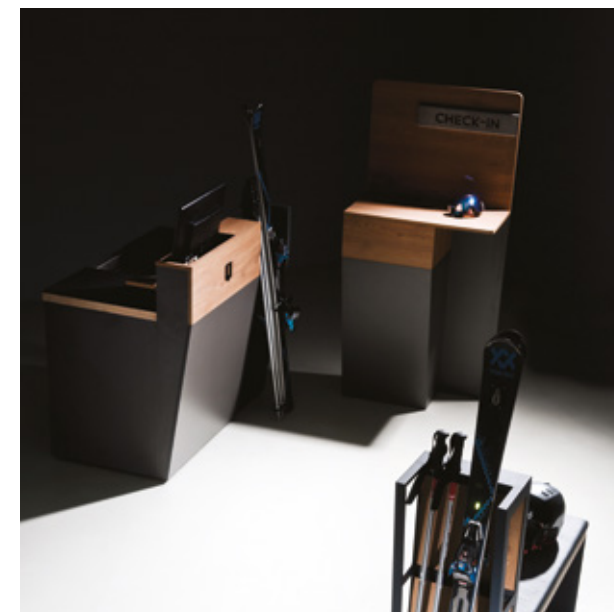

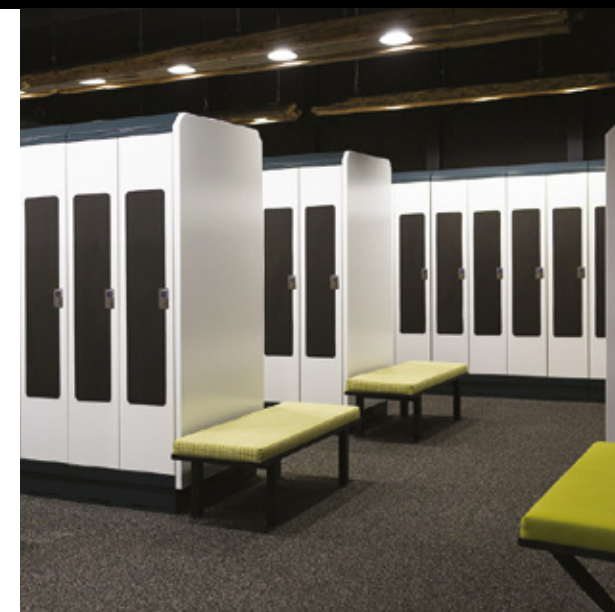

DEPOT LOCKERS

CREATING ADVANCED SKIER ZONES

Lockers are the main equipment of ski depot facilities. It is the storage ergonomics, the drying efficiency, the intuitive locking systems, the durability of the construction and the stylish design that determine the quality of ski depots around the world. This is what makes both the customers and the users satisfied. Ski lockers made by QBL, apart from durability and functionality, are distinguished by a wide range of possibilities to customize the equipment and door finishing.

FURNITURE

CUSTOMIZATION & NATURAL DESIGN

Made of high-quality furniture boards, utility components and steel structural elements, our service desks, check-in desks, benches and modular sofas are all modern and consistent in their look. The ability to fit into storage systems and a number of well-thought-out functions improve the efficiency of service and comfort of use.

DISINFECTION SYSTEMS

SAFETY FIRST

In the new reality, the importance of disinfection has become crucial. Therefore, in addition to the previously available free-standing devices for disinfecting boots and helmets, a built-in disinfection system for dryers and ionising lamps was created. We also offer high-quality non-contact hand sanitiser dispensers to maximise the safety of customers and the service of ski rentals, ski depots and sports shops.

WOJTEK ŚLIWKA
QBL FOUNDER
↓

DEVELOPING THIS COMPANY IS
LIKE THE MOST FASCINATING SKI
EXPEDITION OR A BIKE RIDE.

THE QBL COMPANY WAS FOUNDED IN 2004 BY WOJTEK ŚLIWKA – A GRADUATE OF THE UNIVERSITY OF PHYSICAL EDUCATION IN KRAKOW, A SKI INSTRUCTOR AND A TWO-TIME POLISH CHAMPION IN MOUNTAIN BIKING.

↓

Initially, the company ran a rental shop and a ski school in the cosy mountain town of Ustroń. After several years, there was an opportunity to capture the right moment and Wojtek took advantage of his knowledge of production technologies and sports market trends.

His passion for skiing and biking – accompanied by the experience gained – has, so far, resulted in the first specialised products for storing skiing equipment. The dynamically growing orders seemed surprising and inspiring at the same time. They enabled the development of drying equipment products and led to the first major international projects.

Over the course of several years of full commitment to designing new solutions, developing a presence at international trade fairs and systematically gaining trust, QBL significantly increased its production capacity. Its founder gathered a team of people – with similar values, goals and ambitions – who wanted to create unique projects on a global scale.

Today, the company's headquarters is located in a newly established production and office facility. QBL Systems has an extensive, dynamically developing distribution network and carries out projects related to sports infrastructure in over 40 countries. The quality of QBL Systems products has been affirmed by international experts with prestigious winter sports industry awards – the ISPO Award Winner.

THE QUALITY OF QBL SYSTEMS PRODUCTS HAS BEEN AFFIRMED BY INTERNATIONAL EXPERTS WITH PRESTIGIOUS WINTER SPORTS INDUSTRY AWARDS.

MOUNTAINS

AN ENCOUNTER WITH
THE IMMENSITY OF
SPACE.

THE LOVE OF NATURE IS THE SOURCE OF OUR INSPIRATION AND OUR DRIVE FOR CONTINUOUS IMPROVEMENT.
↓

It is also a 'common denominator' with our customers and product users. We care about natural environment and share a passion for sports and outdoor challenges. We enjoy testing our limits and searching for uncompromising quality.

That is why we provide innovative solutions that ensure the safety and durability of sports equipment. That is why we create appropriate conditions and ergonomic systems for its storage, drying and display.

That is why we enable amateur and professional athletes to enjoy the comfort and character of their equipment. Above all, we share our experience and adapt to individual needs to support our customers' businesses and activities.

This is a great responsibility and a challenge. In any mountains, in any city in the world we are ready for it.

QBL SYSTEMS' HEAD OFFICE

- _PRODUCTION DEPARTMENT
- _LOGISTICS AND TECHNICAL SUPPORT DEPARTMENT
- _TECHNICAL DEPARTMENT
- _SALES AND MARKETING DEPARTMENT
- _DEPARTMENT OF STRATEGY AND DEVELOPMENT

THE NEW QBL SYSTEMS HEADQUARTERS CONSISTS OF A PRODUCTION AND WAREHOUSE PART WITH AN AREA OF 2800M², AND AN OFFICE AREA OF 600M²

↓

The Production Department includes modern, numerically controlled press brakes and laser steel-cutting equipment, bending machines, welding stations, an independent grinding zone and a powder paint shop with an environmentally friendly paint recovery function. Assembly workstations, high-bay racks and a loading ramp are part of the warehouse and logistics infrastructure. The office part consists of two floors with a conference room, social and refreshment area and comfortable office spaces equipped with modern workstations and advanced software for design and production management, sales service, 3D planning and rendering.

TRADE FAIRS

NATURAL CALL FOR COOPERATION

FROM THE VERY BEGINNING MOST OF OUR BUSINESS INITIATIVES WERE INTERNATIONAL.

↓

The most important fairs – in Germany, Austria, Italy and France – played a key role in building the strong, international position of the QBL Systems brand. The exhibition activities also contributed significantly to the initiation of strategic cooperation with entities that are now part of our international distribution network. Today, as a recognised and influential player in the industry, we also participate in several important sports fairs. We are delighted to meet current customers, present key product innovations and establish new relationships. We participate regularly in the following events:

ISPO

GERMANY / MUNICH ↓

INTERALPIN

AUSTRIA / INNSBRUCK ↓

EXPO RAGAZ

SWITZERLAND / BAD RAGAZ ↓

PROWINTER

ITALY / BOLZANO →

PLANNING PROCESS & VISUALIZATIONS_30

PLANNING PROCESS_32

DISCOVER→

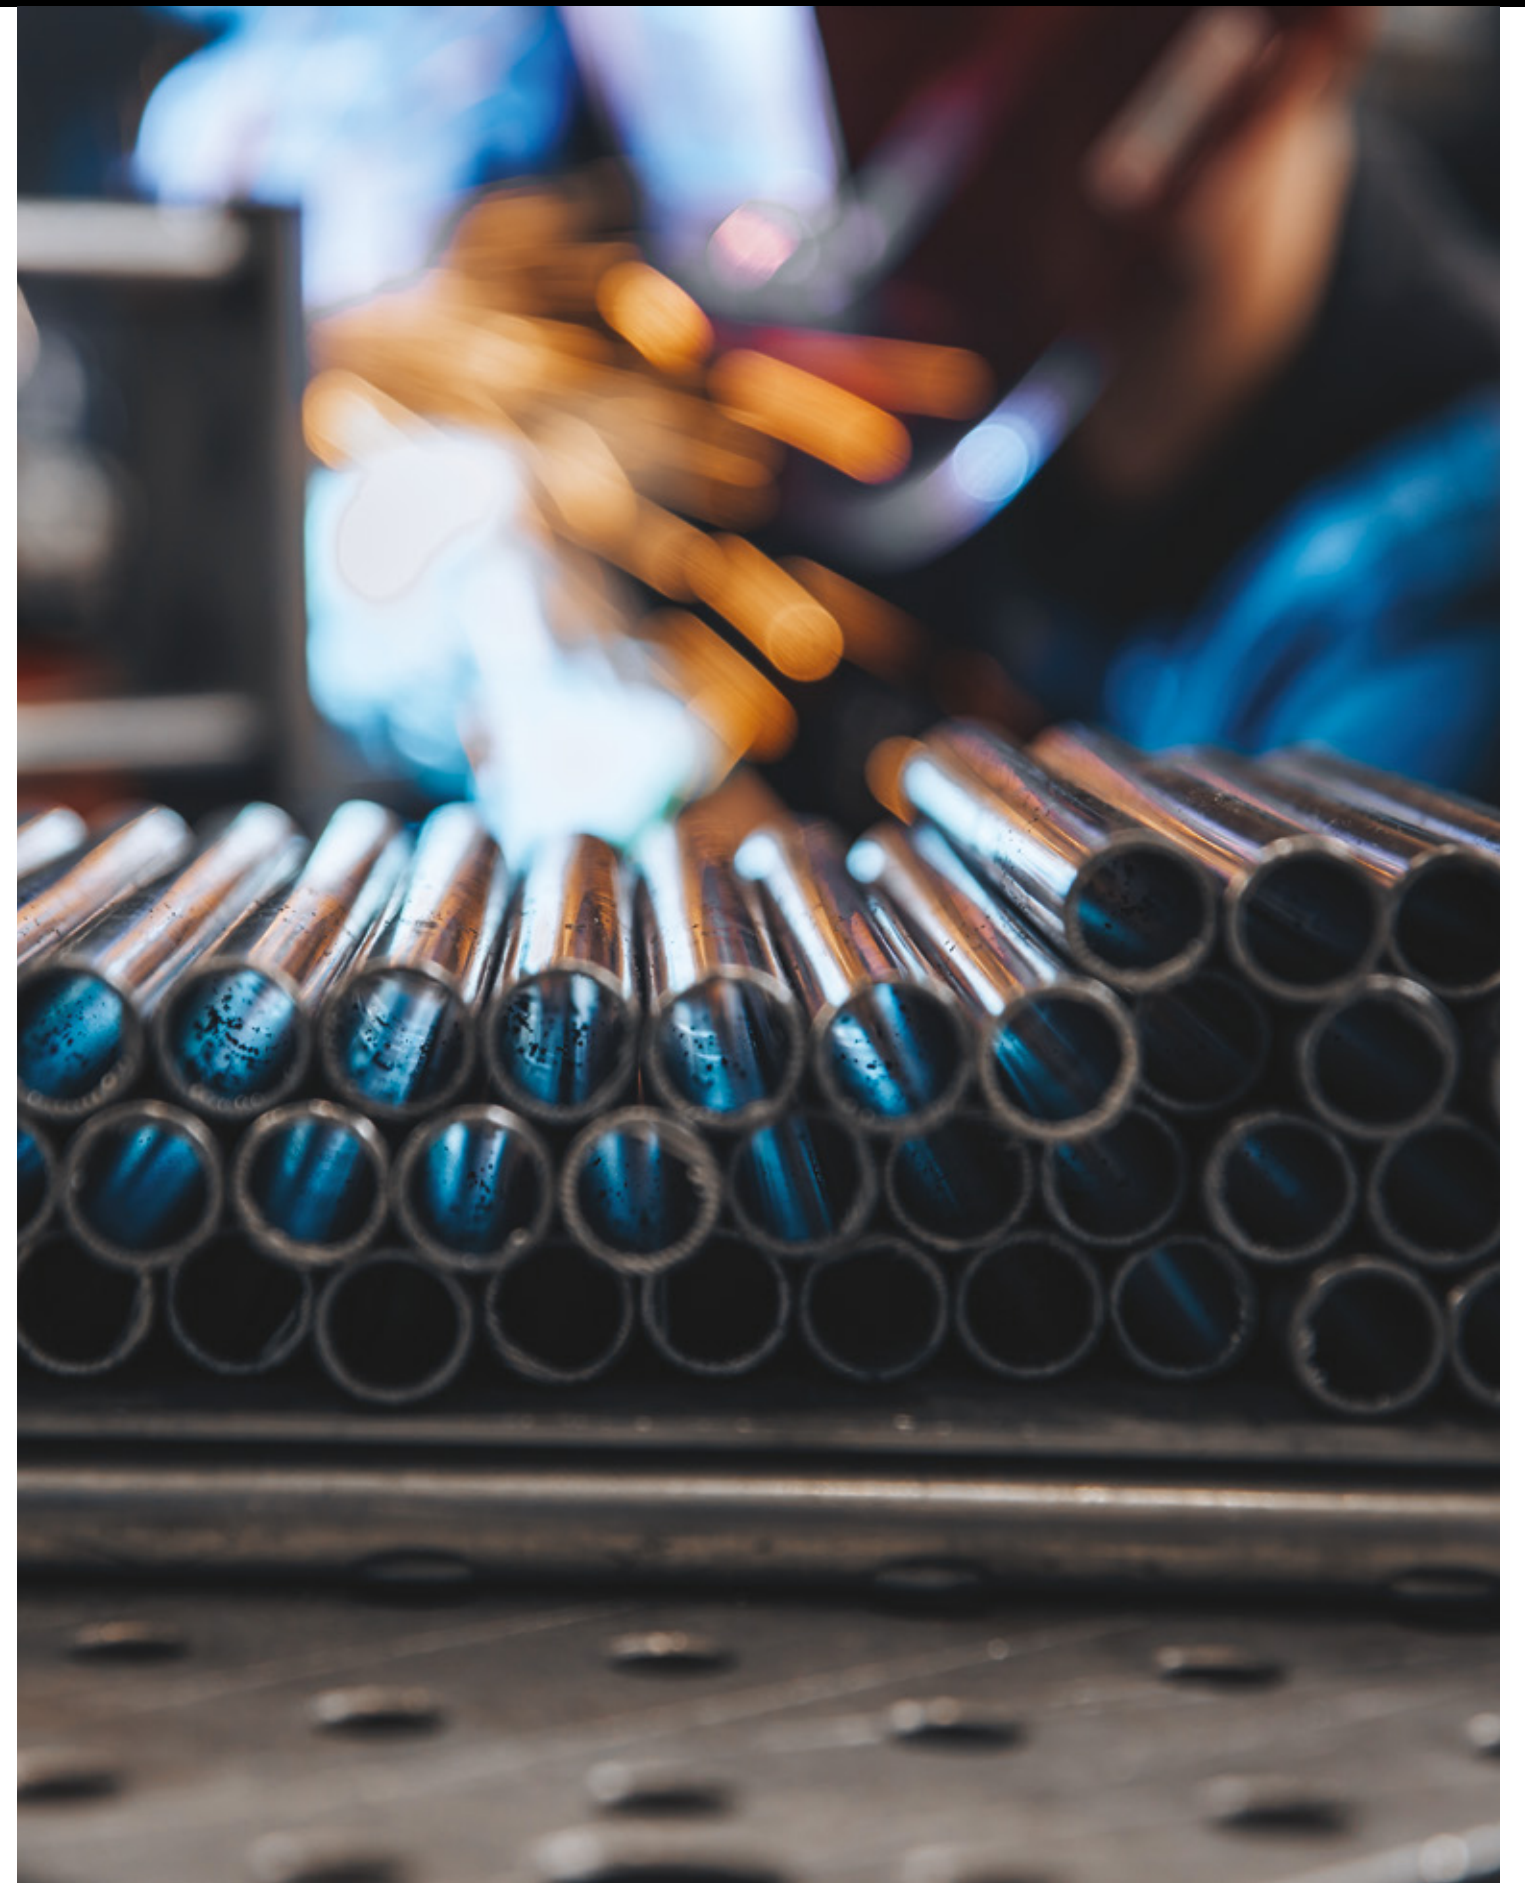

PRODUCTION CAPACITY & DEVELOPMENT

UNLOCKING POTENTIAL OF THE R&D

THANKS TO AN EXTENSIVE PRODUCTION BASE AND EFFECTIVE PREPARATION PROCESSES FOR SEMI-FINISHED AND FINISHED PRODUCTS, WE ARE ABLE TO MANUFACTURE A WIDE RANGE OF STEEL OR PLASTIC ELEMENTS. WE CAN PRODUCE A VAST ARRAY OF SHAPES AS WELL AS DEVELOP MASTER ELEMENTS, MODELS AND PROTOTYPES.

↓

QBL products are optimised for functionality, ergonomics and durability before they are put on the market. Design, materials, capacities and performance – together with our drying systems' energy efficiency – are analysed on a regular basis. After the end of each winter season, our experienced technical department team begins intensive work on the concepts for new products or improvements to the existing ones. They use their expertise to adapt what we offer to the needs of our customers as well as the to the latest market trends.

MACHINERY & PRODUCT QUALITY

ENHANCING TECHNICAL FEATURES AND QUALITIES

WITH ITS PROFESSIONAL EQUIPMENT AND AN EXPERIENCED TEAM OF SPECIALISTS, OUR PRODUCTION DEPARTMENT ENSURES THE HIGHEST QUALITY OF OUR MANUFACTURED PRODUCTS.

↓

We achieve it thanks to technologically advanced, digitally controlled devices that guarantee consistent results and minimise the human risk factor in tasks that require uncompromising precision. High quality raw materials and semi-finished components we use are of key importance in the production of QBL products.

Most components of racks (e.g. levels, angle bars, hoods, shelves, rails, or hooks) are cut from galvanised or stainless steel. The various shapes of steel elements are laser-cut into three-dimensional forms, some of which are then stamped, welded and ground. Painting – which takes place in our modern powder paint shop – in addition to the wide application of galvanised sheet metal, permanently protects the surface of those elements which are most exposed to scratches and, consequently, prone to corrosion.

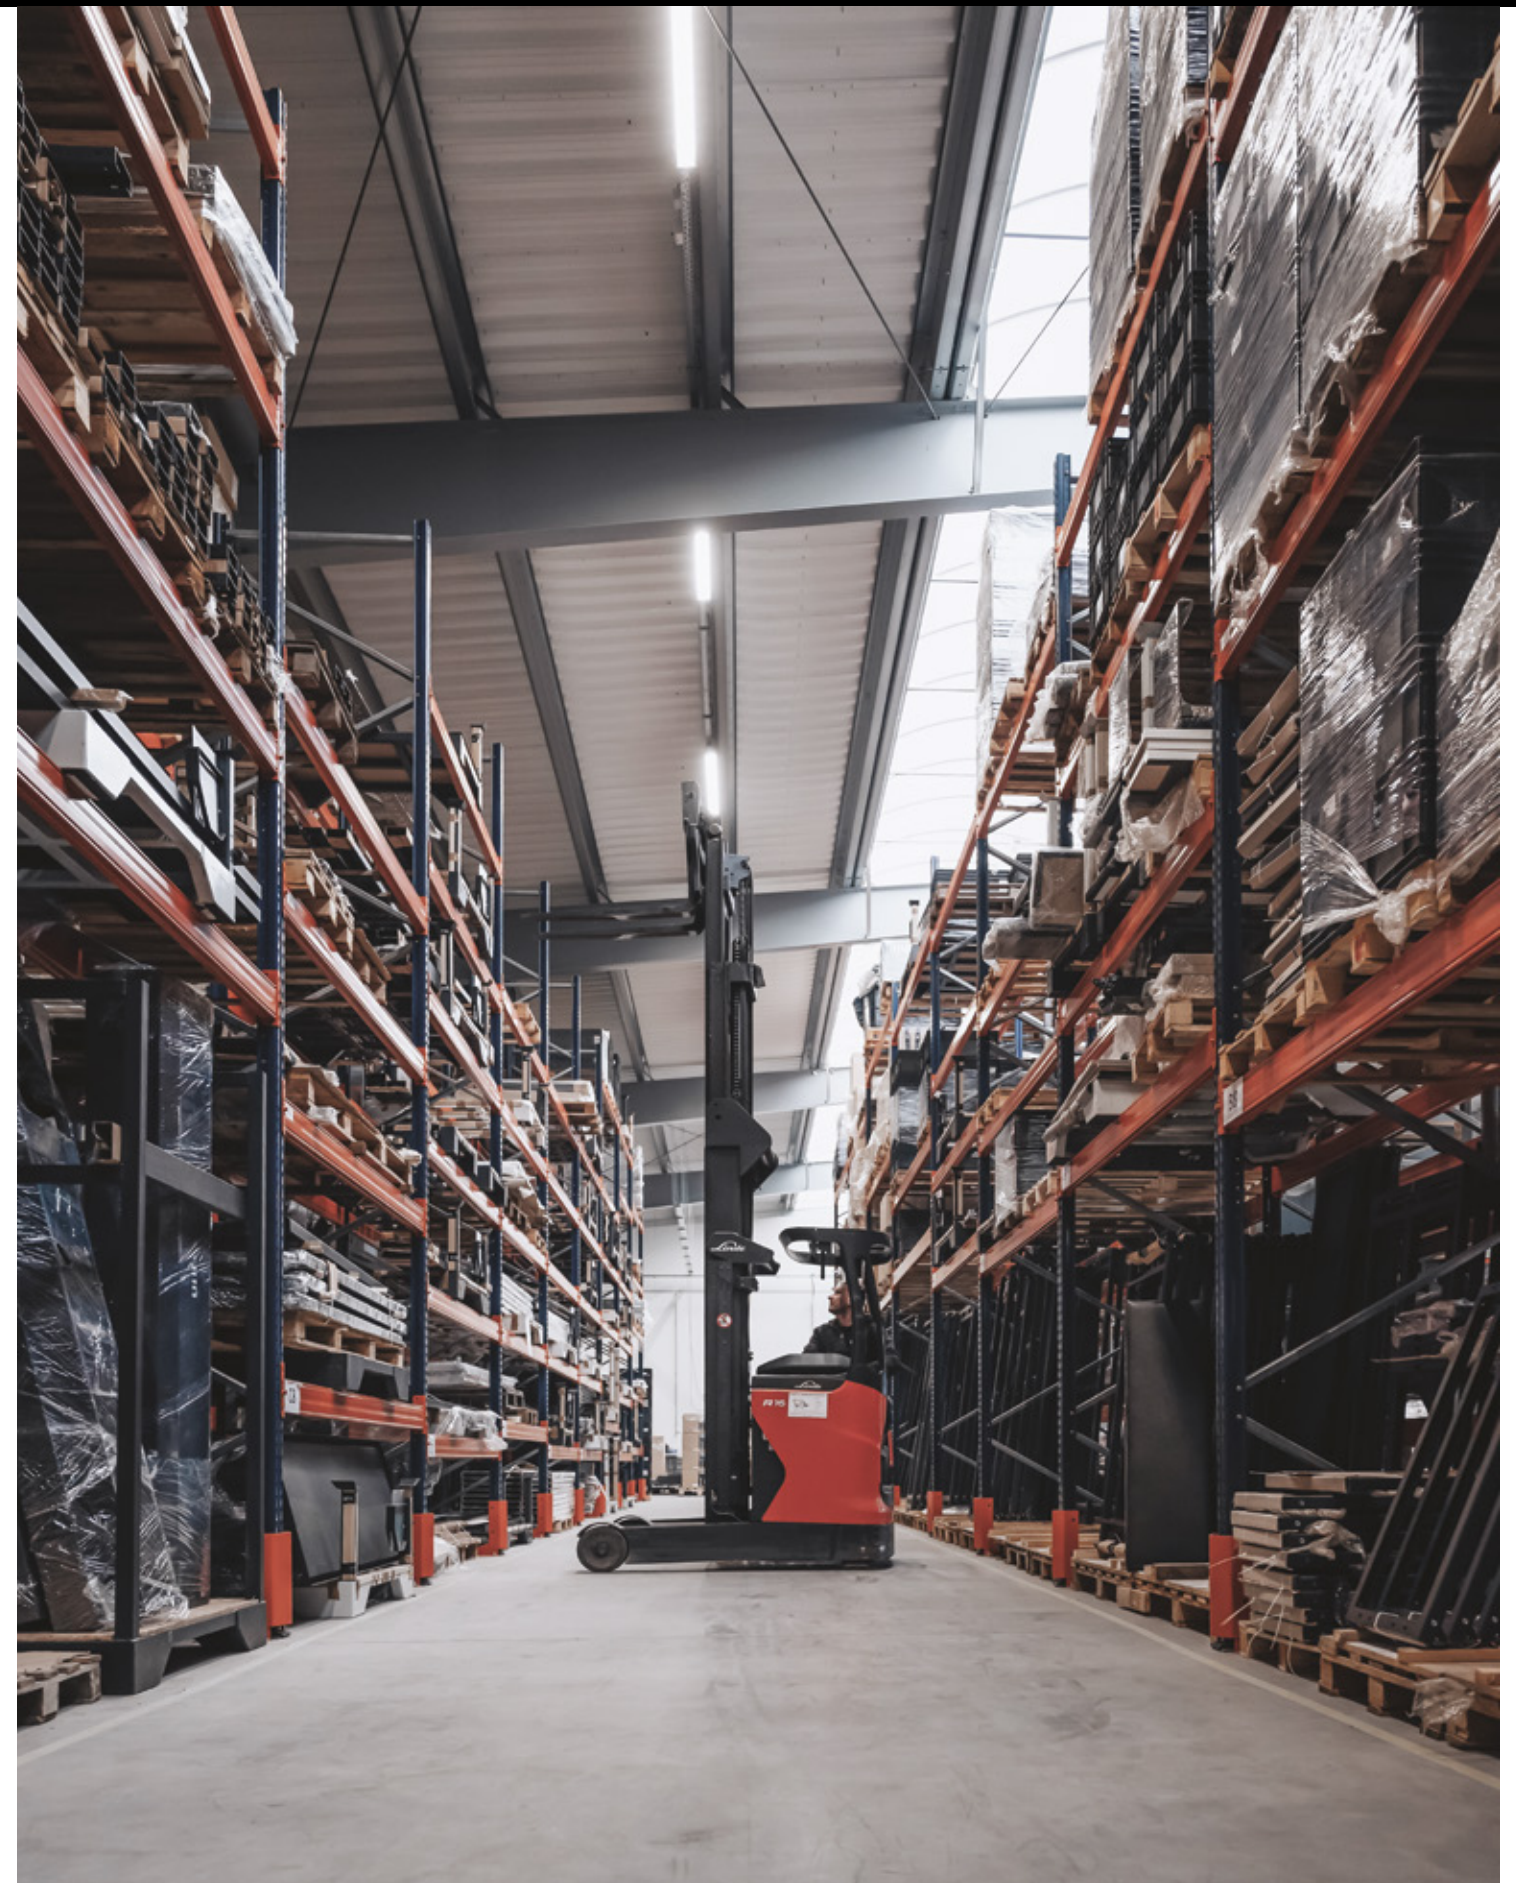

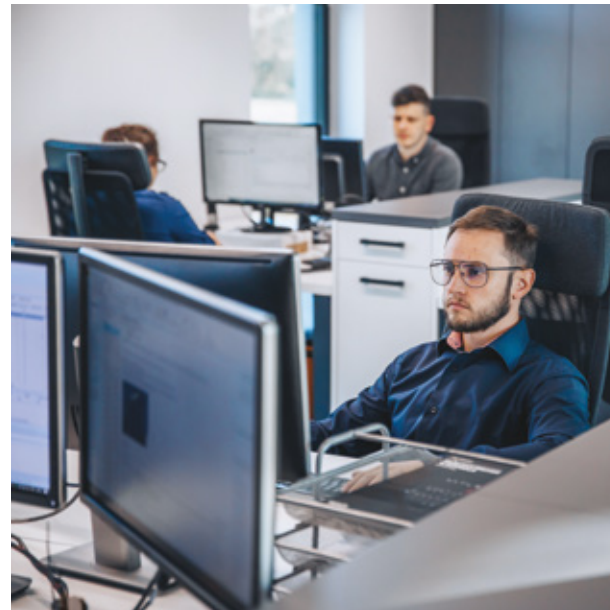

COST SYNERGY & FLEXIBILITY

BEST VALUE FOR MONEY

MOST OF OUR PRODUCTION CHAIN IS WITHIN THE COMPANY'S STRUCTURE AND IS LOCATED IN ONE AREA. THIS GIVES US THE OPPORTUNITY TO BETTER COORDINATE AND SYNERGISE OUR PRODUCTION PROCESSES.

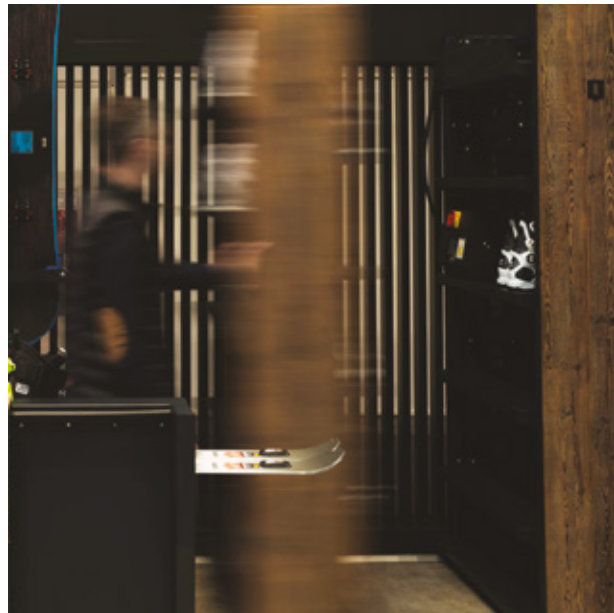

↓

First and foremost, though, it allows us to successfully respond to individual, non-standard customer needs. We can meet specific requirements in terms of product properties and lead times. Thanks to our full control of almost all production stages, we are independent of external companies and our prices do not include intermediaries' margins which is so often the case in competing companies. For years, we have proudly provided our customers with the best value for money.

FUNCTIONALITY & UNIQUE DESIGN

ERGONOMICS AND NATURAL ELEGANCE

IN THE WORKING ENVIRONMENT OF SKI AND BIKE RENTALS, HOTEL DEPOTS OR SPORTS SHOP, 'FUNCTIONALITY' CANNOT BE JUST AN EMPTY PHRASE.
↓

QBL products are designed to safely and smartly store as much gear as possible – taking up the least amount of space while allowing for quick and intuitive use. In addition, our shelves and display systems are designed to offer many possibilities of adjusting their elements to different sizes and types of equipment. On the other hand, drying devices – thanks to innovative solutions and extensive functions – effectively combine high drying performance with energy efficiency.

Quality materials and functionality are key elements, but they are not enough to make a truly great creation. We believe that every product should have unique character. We are committed to creating aesthetic products whose modern design will highlight their simplicity and functionality. Our products create a coherent aesthetic whole and come in a natural, minimalistic form so that they can blend in with our customers' interiors.

PLANNING PROCESS & VISUALIZATIONS

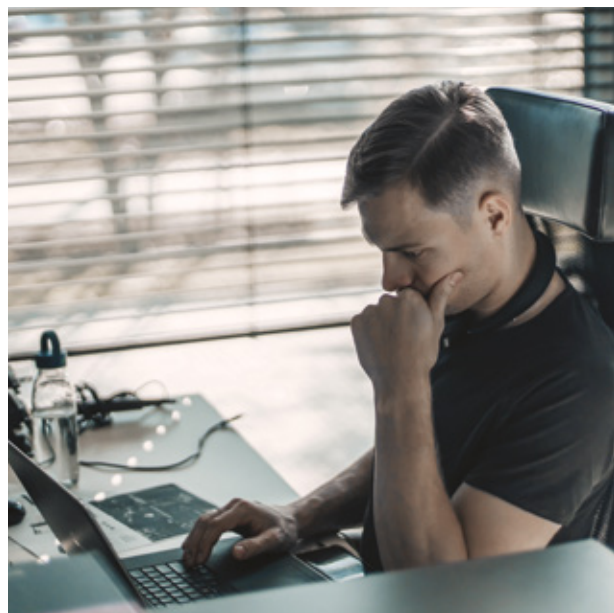

THREE MAJOR STEPS TO SUCCESS

EACH YEAR, WE PREPARE SEVERAL HUNDRED LAYOUTS AND VISUALISATIONS WHICH ENABLE OUR CUSTOMERS TO OPTIMALLY SELECT THEIR STORAGE SYSTEMS AND MAKE MAXIMUM USE OF THE SPACE AVAILABLE IN THEIR FACILITIES.

↓

Using our team's competences and experience, we meticulously develop concepts for floor plans of various sports facilities. The designs are used as a visual tool to help our customers choose the right quantity, model and size of products. After choosing the best type of arrangement – thanks to advanced graphic tools – we create an advanced 3D visualisation. The image created in the rendering process provides our customers with an extremely useful and attractive tool. It can be used for further design and finishing work in spaces under construction or modernisation. Our planning process includes three major steps:

- 1_ Preliminary design
- 2_ Finalising the 2D design
- 3_ 3D Visualisation

STEP 1

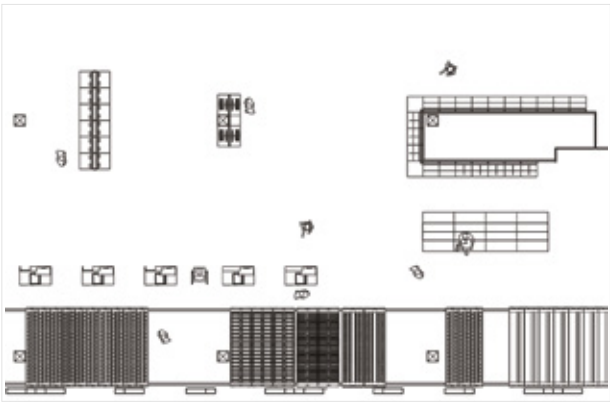

PRELIMINARY DESIGN

The planning process starts with a confirmation of the design assumptions, followed by an analysis of the technical plan and preparation of the initial 2D project. Before we start the preliminary conceptual work on the selection and arrangement of products, we need to collect the most important information. We must understand the function of the rooms or their particular zones. Then we analyse the investor's expectations regarding the types of equipment as well as the storage, drying or display systems' capacity. The draft design is sent to the client to check whether the data readings, basic assumptions and requirements are correct.

INITIAL 2D PROJECT

STEP 2

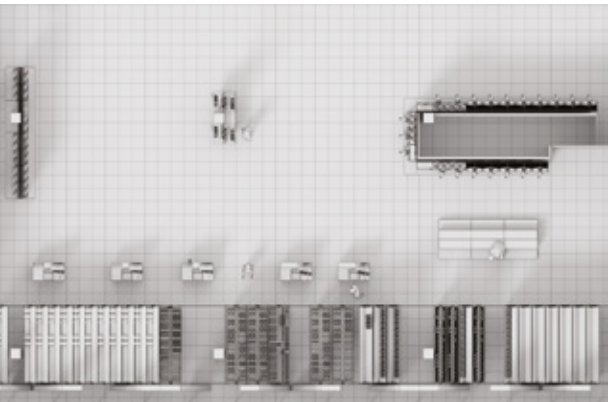

FINALISING THE 2D DESIGN

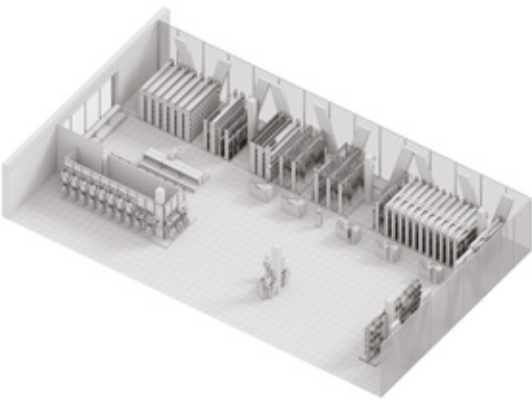

Depending on the complexity and size of the project, the second step may consist of one or a few stages. We might propose several equipment variants. The design work aims to create a comprehensive solution that takes customer suggestions into account. Careful selection of models, sizes and looks, as well as an optimal arrangement of products in space, lead to the final result – an ergonomic design of a functional space that is consistent with the investor's vision.

FINAL 2D PROJECT

AXONOMETRIC VIEW

STEP 3

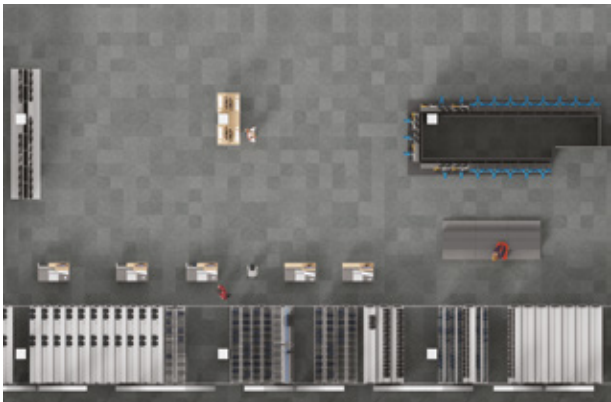

3D VISUALISATION

The customer's acceptance of the 2D project allows us to start working in a 3D environment. Our refined models of QBL racks, dryers, lockers or furniture make it possible to create advanced 3D designs which meet customers' expectations. We use universal models of interior design elements, high-quality textures and powerful rendering engines to create really attractive visualisations. They allow our clients to design the interiors of new rentals, hotels, shops or apartments more accurately and to better picture the final result.

Our references include several hundred facilities where sports equipment is sold, stored and dried. It is not only hundreds of ski rentals, depots and services, but also prestigious hotels, popular sports shops, famous clubs and football associations – as well as modern industrial plants. The geographic scope of the sales of QBL Systems' products covers 40 countries located in five continents. Each year, thanks to an extensive distribution network and cooperation with strong foreign partners, the quality of our products and the functionality of our solutions are appreciated by new customers around the world. The trust and strong relationships pay off. They fuel the dynamic development of our company as the number of orders and our portfolio of successfully completed projects continues to grow every year.

QBL SYSTEMS

LET'S GET IN TOUCH

QBL SYSTEMS OPERATES INTERNATIONALLY THROUGH ITS EXCLUSIVE DISTRIBUTORS.

↓

The distribution chain of QBL Systems includes independent foreign companies from the sports sector. These companies have been in the business for many years and understand its specificity. Their experience and knowledge are crucial for QBL's successes abroad.

We encourage you to contact our QBL representatives in respective countries. You can find their current list on our official website.

In case of new markets, where the distribution has not been established yet, we invite you to contact the QBL headquarters in Poland.
